Abstract
I have been teaching, advising, and mentoring engineering students for over three decades. I found out that many students want and decide to study engineering, but they have no clue what engineering is and they do not know what to expect when majoring in it. This seminar can be very useful for someone who has already decided to study engineering, someone who does not want to choose engineering as a major, as well as someone who is still undecided. The seminar starts with a brief history of engineering and engineering education. It will show the students how exciting and interesting studying engineering can be. It will also illustrate the BENEFITS that come with earning a degree in engineering. The second part of the seminar talks about how to SUCCEED in studying engineering and how to become successful in life.

Faculty Biography
I have been teaching for the Aerospace and Mechanical Engineering Department since 1991. I developed and taught 15 different courses including ENGR 102 Freshman Academy. I have been the recipient of several teaching awards including the Northrop Grumman Excellence in Teaching Award and the USC 2019 Associates Award for Excellence in Teaching. I have been presenting this seminar since 2006 without interruption. In the past, such a seminar was a complete success.
