The graduate program in computer engineering, offered through the Department of Electrical and Computer Engineering, is designed to provide students with an intensive background in the analysis, structure, design and function of digital computers and information processing systems. In addition to giving each student a fundamental background in digital logic, computer architecture and operating systems, a wide variety of elective courses allows for study in the following specialized areas: artificial intelligence; computer architecture; computer networks; computer system performance; design automation; fault-tolerant computers; microprocessors; parallel processing; real-time systems; robotics and VLSI design.

**COMMON BACHELOR DEGREE PROGRAM PATHWAYS**
A list of common bachelor’s degrees that undergraduate students pursue in advance of pursuing a progressive degree option with this graduate program. Some programs are restricted to certain majors while others are open to all students.

BSEE, BSECE, BSCECS, BSCSCI, BSCSBA | Non-Viterbi students are unlikely to have the pre-reqs.

**PREPARATORY UNDERGRADUATE COURSES**
A list of courses at the undergraduate level that prepare students for the graduate program. Required coursework is listed first, followed by recommended courses. If not applicable, this section will be blank.

**CORE GRADUATE PROGRAM REQUIREMENTS (# units required)**
A list of all required graduate courses for the graduate program. None of these courses may be used toward satisfying undergraduate degree requirements. *If special exceptions for any of these courses are made by the academic department, the course # is marked with an asterisk (*) and the exception is explained in the “Department Notes” section at the end of this course plan template.*
